

Conference Reports – Republished from Int J LCA 5 (3) 160 (2000)

The International Conference & Exhibition on Life Cycle Assessment (*InLCA*): Tools for Sustainability

Hyatt Regency Crystal City, Arlington, Virginia, 25 – 27 April, 2000

Mary Ann Curran

US EPA Office of Research & Development, 26 W. Martin Luther King Drive (MS-466), Cincinnati, Ohio, USA 45268;
e-mail: curran.maryann@epa.gov

The goal of *InLCA* was to provide an international forum to explore and discuss the various applications of the life cycle concept in environmental management and sustainability. Co-hosted by the US Environmental Protection Agency and the Institute for Environmental Research & Education (IERE), the conference attracted 265 attendees (a little over one-half were from the US) and 10 exhibitors.

The first day of the program consisted of an opening plenary session in which speakers provided broad-based views on achieving goals of sustainability, the major challenges and opportunities the LCA community faces, and what government and private industry can do to better integrate environmental decision-making with a life-cycle basis. The speakers spoke very sincerely about the need for both industry and government to look broadly at their activities and the value that tools such as LCA offer to reach sustainability. The keynote address was presented by the Honorable Anders Wijkman, member of the EU Parliament representing Sweden. Mr. Wijkman highlighted several key issues in moving society toward sustainability, including elevating our efforts to evaluate resource efficiency, energy demands, and internalizing external environmental costs. He also mentioned the need to strengthen global governance and apply LCA systematically when evaluating environmental impact choices.

The following speaker was Bas de Leeuw of the United Nations Environment Program (UNEP). Mr. De Leeuw referred to the huge untapped potential for the use of LCA as a decision-support tool. Further, he encouraged outreach to the social scientists who are unfamiliar with LCA. With LCA as a key concept, LCA developers and social scientists should be collaborating on tool development.

Completing the morning session was Marc Epstein of Rice University who spoke toward the industrial view of applying life cycle thinking as a tool for moving toward sustainability. Mr. Epstein said a key challenge is to convince corporate management that there is value to the company in looking broadly at their activities. To communicate this, one must speak their language.

The afternoon plenary session included very informative talks on the global issues of LCA given by Joel Ann Todd, SCG, Paolo Frankl, University of Rome, Ron Williams, General Motors, Dan Fiorino, EPA, Kevin Brady, Five Winds, and Rita Schenck, EcoSense. It was very apparent that the messages presented by the plenary speakers enthused the meeting attendees. This enthusiasm was sustained throughout the three-day conference as attendees listened to the technical presentations given on the second and third days of the conference. Many people commented on the high quality and range of the presentations.

Approximately 70 technical presentations were scheduled across four parallel tracks in morning and afternoon sessions. The themes of the sessions were varied and were aimed toward applications of LCA:

- Pollution Prevention
- LCA Methodology Issues
- Software Tools
- Decision-Making Approaches
- LCA Case Studies
- Management & Regulatory Issues
- External Reporting & Communication
- Data Quality & Availability
- Measures of Sustainable Development
- Natural Resource Use
- Product & Process Development & Design

On the afternoon of the last day, a wrap-up session was held to solicit input from attendees for ideas on how to advance the adoption of life cycle assessment as a tool for achieving sustainability as well as suggestions for improving the format of future conferences. Regarding the advancement of LCA, there was a sense of general agreement that LCA is poised to take off as a technique with many applications; its usefulness needs to be promoted wherever appropriate. As in many general discussions on LCA methodology, there was a strong desire expressed to make LCA simpler. At the same time, the field is moving toward place-specific analyses which will require more detailed, site-specific data. Finally, the need for the LCA community to reach out to embrace related disciplines was recognized.

Format recommendations included 1) offering an introductory class on LCA with hands-on exercises, 2) making slide presentations available before the conference, 3) eliminating parallel tracks, or having no more than two, 4) have more exhibitions and assign dedicated display times, and 5) grouping posters by sessions with scheduled presentations.

With the tremendous success of this international conference and the intense interest of the attendees to learn more about LCA, tentative plans are to host the next US-based LCA conference in July or August of 2002 (recognizing that a Life Cycle Management conference is to be held in Copenhagen in August 2001). Seattle, Washington, has been selected as a possible location. Plans will be coordinated with other organizations that hold similar conferences, such as SAE, IEEE, and SETAC.

The final program, abstract and presentation slides from speakers who submitted them can be found at IERE's website: www.iere.org.

Int. J. LCA – Author Information

Int. J. LCA is a peer-reviewed journal. Each article is reviewed by at least two referees.

Submission of papers:

Authors are asked to submit a (tentative) summary to both the editor-in-chief and the editor via e-mail

Manuscripts (1 hardcopy) should be sent to:

Editor-in-Chief: Walter Klöpffer, Ph.D.,

Professor of Physical Chemistry

C.A.U. GmbH

Daimlerstr. 23

D-63303 Dreieich, Germany

T: +49-6103-983-28; F: +49-6103-983-10

w.kloepffer@cau-online.de; walterkloepffer@cs.com

Manuscripts (3 hardcopies and a disk with text, figures and tables) should be sent to:

Editor: Almut Beate Heinrich

ecommed publishers

Justus-von-Liebig-Str. 1

D-86899 Landsberg, Germany

T: +49-8191-125-469; F: +49-8191-125-492

a.heinrich@ecommed.de; www.scientificjournals.com/lca

Referees:

Please submit the names and full contact details (including e-mail addresses) of three suitable reviewers.

Manuscript Requirements

Disks for all manuscripts should be supplied.

Format: MS-Word for Windows, Office 97.

Format for graphics: TIF.

Contributions can be submitted both in British and American English

1. Please use no indentations and refrain from centering your text. Instead, left margins should be used throughout the text. Allow the right margin to flutter
2. The line spacing should be 1.5
3. The size of the typeface should be 11 pt
4. The font type should be Times New Roman
5. Do not use automatic syllabification
6. Use page numbers at the bottom
7. **Authors' names** both in text and list of references have to appear as lower and upper case letters (no caps, no small caps, no bold face). Authors' names in the list of references are separated by commas
8. **Footnotes:** in **tables** use small letters. In **text** use Arabic numerals and number them consecutively
9. **Formulas and equations:** Chemical equations should be numbered consecutively along with mathematical equations
10. **Nomenclature:** Chemical Abstracts nomenclature rules are contained in the Chemical Abstracts Index Guide. If nomenclature is specialized, include a "Nomenclature" section at the end of the paper, giving definitions and dimensions of all terms
11. **Units:** Use only metric units (SI) and some other units listed in ISO 1000, e.g. kWh in order to distinguish electrical energy from other forms of energy

- **Length of articles (including references, tables, figures)**
 - Research articles (full papers) up to 10 typewritten pages
 - Short papers up to 2-3 typewritten pages
 - Reviews up to 15 typewritten pages
- **Title:** Should be left-justified using both upper and lower case letters. Use specific and informative titles. They should be as brief as possible. If necessary, divide into title and subtitle. **Example***

Example for title and authorship:

Science and Technology Challenges for the Environmental Cleanup of the Cold War Legacy

Curtis Travis¹, Alvin L. Young², Miles C. Dionisio²

¹ Project Performance Corporation, Oak Ridge, TN 37909, USA

² Center for Risk Excellence, United States Department of Energy, Argonne, IL 60439, USA

Corresponding author: Curtis Travis (traviscc@icx.net)

- **Authors:** Should be left-justified using both upper and lower case letters. List the first name, middle initial, and last name of each author. Give the complete mailing addresses directly beneath the authors' names. In papers with more than one author, indicate the corresponding author directly beneath the authors' addresses with e-mail. **Example***
- **Abstracts:** Please divide the abstract into the following sections and **subtitle** them accordingly (this structure may be adjusted to the species of article, e.g. research paper, review, commentary, or else):
 1. Intention, Goal, Scope, Background
 2. Objectives
 3. Methods
 4. Results and Discussion
 5. Conclusions
 6. Recommendations and Outlook
- **Keywords:** Supply up to 14 keywords, alphabetically ordered and separated by semicolons
- **Text:** Be complete but concise. Avoid repetition. Divide the article into sections, each with an appropriate heading. A good subdivision of the article is most desirable
- **References:** There are two options for citation of literature references:
 1. They can be **numbered** (use square brackets) and listed in order of reference in text. In the text, just the number should be used in (square) brackets
 2. They can be **ordered alphabetically**. In this case, authors' surnames and year of issue should appear in the text in parentheses

Journal references must contain authors' surnames with initials, year of issue, journal source, volume number, and the first and last page number of the article. **Titles:** Use either upper or lower case letters. **Examples****

- **Tables and Figures:** Include a list of captions (for tables) and legends (for figures) on a separate sheet. Number all tables and figures using Arabic numerals in the order of appearance in the text

Tables:

1. Please make use of the "Table" function from Word
2. Width: 8,5 cm or 17,5 cm
3. Do not use tab stops.
4. Do not use grid patterns except for purposes of differentiation
5. Typeface: Helvetica
6. Please note that references to the Tables should be made with small letters and not with numerals or asterisks
7. Do not use frames or double lines for the tables but a line (0,5 pt) above, below and lines within the table.
Line thickness: 0,5 pt

Figures (line drawings):

1. Format: TIF (Tagged Image Format); high resolution: 300-600 dpi; line thickness: 0,5 pt; width: 8,5 cm or as wide as absolutely required
2. Lettering: Helvetica. Please do not use any contoured typeface or other unusual font. Easy readability is what matters most
3. If you use color figures, the colors must be transformed into gray-scale levels. **Color reproduction** is possible provided the author bears all incremental charges. Charges will be given upon request
4. Grid patterns may only be used to differentiate the importance of contents and not for lay-out purposes

Authors obtain the final PDF file (with true page numbers) in high resolution.

Reprints can only be purchased.

Free Journal Copies: 1 copy for each author

Online-First Publication: Prior to the publication in the printed edition, the articles will be published in **LCA-OnlineFirst** (<http://www.scientificjournals.com/onlinefirst>).
